

FOR IMMEDIATE RELEASE

Bensen Days 2010
April 21-25th
Wauchula Florida

Gyroplane, Gyro, Giro, Gyrocopter or whatever you call it, it is a type of aircraft that pilots don't just fly but are addicted too. Yet this amazing, affordable, nimble aircraft is one of the most misunderstood machines in aviation history.

Odds are that you have never piloted a gyroplane and even pretty good that you have never even seen one fly in person. Yet opinions abound. Those who fly them think that when properly maintained and piloted they are the safest type of aircraft for recreational flying. They can not stall or spin, they land with little or no ground roll, they land with full control even without power. The inherent engineering flaws which lead to problems like powered push over (PPO) and pilot induced oscillation (PIO) in the past, have been designed out of modern machines.

The 37th Annual Bensen Days Gyroplane Fly In will take place at the Wauchula Municipal Airport (CHN) in Wauchula Florida April 21 through April 25th. Hosted by Sunstate Wing and Rotor Club this event named after one of the pioneers in homebuilt flying Igor Bensen is the largest Gyroplane fly in the eastern US.

We welcome you to join us to celebrate aviation and the marvel called the Gyroplane. For more information visit [WWW. Bensendays.com](http://WWW.Bensendays.com).
